Subject Index

Volume 7, 1985

Acridine orange staining
  Staining of effusions, cytologic and FCM detection of malignant cells, 227
  With Giemsa counterstain, breast carcinoma smears for DNA microfluorimetry, 159
Adenocarcinoma, lung, DNA analysis in histologic sections, 153
Adenoma, colon, statistical histometric assessment, 32
Adenomatous structures, low-resolution quantitative analysis, 205
Amyloid, morphometric measurements, reproducibility with different staining methods, 267
Aneuploidy, test statistics for detection, 131
Antibody, monoclonal, demonstration of melanoma-tumor-associated antigen in effusions and needle aspirates, 72
Antigen
  Blood group cell surface, staining for in bladder irrigation aspirates, 69
  Melanoma-tumor-associated, demonstration by monoclonal antibody in effusions and aspirates, 72
Aspiration, endouterine, screening for endometrial carcinoma, 61
Automated microscopy (*see also* high-resolution image analysis)
  High-resolution, 2, 4
  Standardized dyes and stains for, 6
  Symposium, 1

Bladder
  Cancer in irrigation fluid, staining for DNA and blood group antigen analysis in cells, 69
  Noninvasive papillary transitional-cell tumors, karyometric and DNA analysis, 337
Body cavity fluids, cytologic and AO FCM detection of malignant cells, 227
Breast
  Carcinoma, AO DNA microfluorimetry with Giemsa counterstain, 159
  Invasive ductal cancer, stereologic correlates of SR concentration, 310
Bronchitis, chronic, diagnostic morphometry, 183
Burkitt's lymphoma, subgroups, morphometric distinction in cell lines, 275

Cancer, invasive ductal breast, stereologic correlates of SR concentration, 310
Carcinoembryonic antigen (CEA), morphometric analysis in histopathology, reproducibility related to sampling, 271
Carcinoma
  Breast, AO DNA microfluorimetry with Giemsa counterstain, 159
  Endometrial, screening by aspiration cytology and tumor marker analysis, 61
  Endometrial and ovarian, ploidy disturbances, 327
  Pulmonary squamous, DNA analysis in histologic sections, 153
Cell image analysis, high resolution, (*see* image analysis, automated microscopy)
Cells
  Automated pattern recognition, standardized dyes and stains for, 6
  Bladder irrigation fluid, staining for DNA and blood group antigen analysis, 69
  Extraction from paraffin-embedded tissue for single-cell DNA cytophotometry, 343
  Intraocular melanoma, reproducibility of nucleolar measurements, 174
  Lymphoid, automated classification, 38
  Lymphoid in nonneoplastic lymph nodes, nuclear morphometry, 288
  Malignant in body cavity fluids, AO FCM and cytologic detection, 227
  Nonneoplastic and neoplastic thyroid, ploidy analysis, 97
  Tumor in effusions and aspirates, MAb demonstration of melanoma-tumor-associated antigen, 72
Cervix
  Dysplasia, ploidy patterns, 213
  Intraepithelial neoplasia
    Computer grading, 52
    Colpohistologic correlations, 47
  Precancerous and cancerous lesions, discrimination by DNA measurements in tissue sections, 320
Chromatin, structure during neoplasia, quantitative description by image processing, 178
Classification, automated, lymphoid cells, 38

0884-6812/85/0704-0349/$02.00/0 © The International Academy of Cytology

Colon
Adenoma, statistical histometric assessment, 32
Benign and malignant mucosa, quantitative low-resolution analysis, 205
Colpohistologic correlations, computerized study, 47
Computer
FCM system, EPICS C, 187
Grading of CIN lesions, 52
Cytochemistry, staining of subcellular organelles for image analysis, 256
Cytology
AO-stained body cavity fluids, detection of malignant cells compared with FCM, 227
Analytical and quantitative, 2
Cytometry
High-resolution, rapid ploidy measurements, 81
Rapid DNA image, detection of precancerous and cancerous lung lesions, 218
Cytophotometry
Breast carcinoma, acridine orange–Giemsa staining, 159
DNA ploidy analysis, specimen preparation and staining, 107
Diagnosis and grading of malignancy, algorithm, 347
Single-cell DNA, extraction of cells from paraffin-embedded tissue, 343

DNA analysis (*see also* ploidy analysis)
Bladder cancer, staining for, 69
Cervical lesions, precancerous and cancerous, measurements in tissue sections, 320
Diagnosis and grading of malignancy, 347
Lymphomas, measurements in thin sections, 315
Noninvasive papillary transitional-cell tumors, 327
Pulmonary dysplasias, early detection of precancerous and cancerous lesions, 218
Relation of nuclear mass, volume and size, 119
Single-cell cytophometric, extraction of cells from paraffin-embedded tisue sections, 343
Specimen preparation and staining, 107
Squamous carcinoma and adenocarcinoma of the lung, 153
Tissue sections
Precancerous and cancerous cervical lesions, 320
Methodology, 315
DNA histograms, interpretation, 90
Decision making, histopathologic, use of ROC curves, 167
Diabetes, sympathetic ganglia in, EM and stereologic study, 305
Dimensions, nuclear, distribution, 119
Distributions
Log-normal, nuclear mass, volume and dimensions, 119
Multinomial, in ploidy analysis, 140
Dyes, standardized, for automated cell pattern recognition, 6
Dysplasia (*see also* neoplasia, cervical intraepithelial)
Cervical, ploidy patterns, 213
Pulmonary, early detection of lesions by DNA image cytometry, 218

EPICS C Analyzer, FCM computer system, 187
Effusions, tumor cells in, demonstration of melanoma-tumor-associated antigen, 72
Electron microscopy (EM), sympathetic ganglia in diabetes, 305
Emphysema, diagnostic morphometry, 183
Endometrium, carcinoma
Ploidy disturbances, 327
Screening by aspiration cytology and tumor marker analysis, 61
Enzymatic activity, subcellular organelles, cytochemically stained image analysis, 256
Errors, measurement, relationship to measurement scales, 242
Eye, intraocular melanoma, reproducibility of nucleolar measurements, 174

Feature extraction, digital image analysis, chromatin structure during neoplasia, 178
Female genital tract, ploidy analysis, 90
Flow cytometry (FCM)
AO-stained body cavity fluids, detection of malignant cells, 227
EPICS C computer system for, 187
Fluids, body cavity, cytologic and AO FCM detection of malignant cells, 227

Ganglia, sympathetic in diabetes, EM and stereologic study, 305

Histometry, statistical, diagnostic assessment of tissue sections, 32
Histopathology
Decision making, use of ROC curves, 167
Diagnostic, theoretical aspects and relation to morphometry, 164
Stereology and morphometry in, principles of application, 237
Hyperploidy, test statistics for detection, 131

Image analysis
High-resolution, ploidy measurements, 81
Low-resolution, colonic mucosa, 205
Magiscan 2, medical applications, 192
Stereologic extraction of information, 197
Subcellular organelles, cytochemical stains in, 256
Image processing, chromatin structure during neoplasia, 178
Indices, cytologic, in computer grading of CIN lesions, 52

Karyometry, nuclear, noninvasive papillary transitional-cell tumors, 327

LARC automated analyzer, classification of lymphoid cells, 38
Lesions
CIN, computer grading, 52

Cervical precancerous and cancerous, discrimination by DNA measurements in tissue sections, 320
Precancerous and cancerous lung, early detection by rapid DNA image cytometry, 218
Leukemia, chronic lymphocytic and acute lymphoblastic, automated classification of cells, 38
Lung
Emphysema and chronic bronchitis, diagnostic morphometry, 183
Precancerous and cancerous lesions, early detection by rapid DNA image cytometry, 218
Squamous carcinoma and adenocarcinoma, DNA analysis in histologic sections, 153
Lymph nodes, nonneoplastic, nuclear morphometry of lymphoid populations, 288
Lymphoma
Burkitt's, morphometric distinction of subgroups, 275
DNA measurements in thin sections, 315
Non-Hodgkin's malignant, morphometric characterization of nuclei, 283

Magiscan 2, image analysis with, medical applications, 192
Malignancy, DNA-cytophotometric diagnosis and grading, 347
Marker analysis, endometrial carcinoma, endouterine aspirates, 61
Mass, nuclear, distribution, 119
Measurements
Morphometric, scales, statistics, errors and resolution, 242
Reproducibility
Morphometry of amyloid with various stains, 267
Morphometry of CEA staining in histopathology, 271
Nucleoli in intraocular melanoma cells, 174
Melanoma
Associated antigen, demonstration by monoclonal antibody in effusions and aspirates, 72
Intraocular, reproducibility of nucleolar measurements, 174
Microfluorimetry, breast carcinoma, acridine orange–Giemsa staining, 159
Microspectrophotometry, quantitative absorbance, practical considerations, 107
Morphometry
Amyloid detection, reproducibility of measurements with various stains, 267
Automated, classification of lymphoid cells, 38
Burkitt's lymphoma, distinction of subgroups, 275
CEA staining in histopathology, reproducibility and variation of measurements, 271
Diagnostic, emphysema and chronic bronchitis, 183
In histopathology, principles of application, 237
Influence of standardized fields, 271
Lymphoid cell nuclei in nonneoplastic lymph nodes, analytical evalutors, 288
Measurement issues (scales, statistics, errors and resolution), 242
Non-Hodgkin's malignant lymphoma, characterization of nuclei, 283
Peripheral nerves, 299
Multimodal frequency distribution analysis, 294
Relation to stereology, 197
Relation to theoretical aspects of diagnostic histopathology, 164
Sampling, statitical aspects, 250
Subcellular organelles, cytochemical stains in, 256
Use in morphologic diagnosis, 163
Mucosa, colonic benign and malignant, quantitative low-resolution analysis, 205

Neoplasia
Cervical intraepithelial
Colpohistologic correlations, 47
Computer grading, 52
Discrimination by DNA measurements in tissue sections, 320
Ploidy patterns, 213
Chromatin structure in, quantitative description by image processing, 178
Nerves, peripheral
Morphometry in daily practice, 299
Multimodal frequency distribution analysis, 294
Nuclei
Burkitt's lymphoma, morphometric distinction of subgroups, 275
Distribution of mass, volume and dimensions, 119, 125
Lymphoid cells in nonneoplastic lymph nodes, morphometric analytical evaluators, 288
Non-Hodgkin's malignant lymphoma, morphometric characterization, 283
Nucleoli, intraocular melanoma cells, reproducibility of measurements, 174

Organelles, subcellular, cytochemical stains in image analysis, 256
Ovary, carcinoma, ploidy disturbances, 327

Pathology
Quantitation in, 163
Stereology and morphometry in, 197
Pattern recognition, automated of cells, standardized dyes and stains for, 6
Ploidy analysis (*see also* DNA analysis)
CIN lesions, 52
Combined slide and flow cytophotometry, 97
Considerations, 152
Endometrial and ovarian carcinomas, 327
High-resolution and flow cytometric, 89
High-resolution cytometric, 81
Multinomial distributions in, 140
Patterns in cervical dysplasia, 213
Specimen preparation and staining, 107
Statistical considerations, 126
Test statistics for detecting aneuploidy and hyperploidy, 131

Thyroid, nonneoplastic and neoplastic cells, 97
Tissue sections, methodologic and interpretational considerations, 90, 96

Quantitation, in pathology, 163

ROC curves, use in histopathologic decision making, 167
Resolution, image, digitization and measurement, 242

Sampling
Effect in morphometric measurements, 271
Morphometric, statistical aspects, 250
Screening, endometrial carcinoma, aspiration cytology and tumor marker analysis, 61
Specimen preparation, DNA cytophotometry, 107
Stains
Cytochemical, in image analysis of subcellular organelles, 256
Feulgen and gallocyanine-chromealum for DNA cytophotometry, 107
Histologic, influence on morphometric measurements of amyloid, 267
Papanicolaou, use in automated cell image analysis, 6
Romanowsky-Giemsa, use in automated cell image analysis, 6
Simultaneous, DNA and blood group antigen analysis, 69
Standardization for automated cell pattern recognition, 6, 31
Standardization, dyes and stains for automated cell pattern recognition, 6
Statistics
Consideration in sampling in morphometry, 250
Detection of aneuploidy and hyperdiploidy, 131
Multimodal frequency analysis, peripheral nerve morphometry, 294
Ploidy analysis, 140
Ploidy pattern analysis, 126
Relationship to measurement scales, 242
Stereology
Correlates of SR receptor concentration in invasive ductal breast cancer, 310
In histopathology, principles of application, 237
Relation to morphometry, 197
Sympathetic ganglia in diabetes, 305
Steroid receptor concentration, invasive ductal breast cancer, stereologic correlates, 310

TICAS system, ploidy measurements, 81
Thyroid
Nonneoplastic and neoplastic disorders, ploidy analysis, 97
Ploidy analysis, 106
Tissue sections
DNA measurements
Cervical lesions, 320
Lymphomas, 315
Diagnostic assessment, statistical histometry in, 32
Paraffin-embedded, extraction of cells for single-cell DNA cytophotometry, 343
Ploidy analysis, methodologic and interpretational considerations, 90, 96
Squamous carcinoma and adenocarcinoma of lung, DNA analysis, 153
Tumors, noninvasive papillary transitional-cell, karyometric and DNA analysis, 327

Urothelium, noninvasive papillary transitional-cell, karyometric and DNA analysis, 327

Volume, nuclear, distribution, 119
